

Since the 1990s, the aging of China is accelerating. The population aged 65 and older has increased from 62.9 million in 1990 to 8,111 million in 2000, accounting for 7.0% of the population. In 2014, the population over the age of 60 has increased to 2.12 billion people, accounting for 15.5% of the population. By 2040, the proportion of elderly people aged 65 or over in the total population is projected to exceed 20.0%. In order to improve the living satisfaction of elderly people, it is necessary to clarify factors that have a significant influence on the living satisfaction of the elderly. In this article, based on personal attributes, support system at home, and social support system, the district young people (company district Yoro is a method of nursing care where elderly people receive home care for employees in the district while receiving elderly family care. Specifically, there are methods such as visiting elderly houses, providing daily home care services to the elderly, and developing community activities for the elderly) Then, using proposal model of "Chinese Longitudinal Healthy Longevity Survey (hereinafter abbreviated as CLHLS 2011, CLHLS 2011)" conducted in 2011 · 2012 and 2014, Perform an empirical analysis with an ordered probit model. The aim of this paper is to firstly find factors that have a significant influence on the subjective life satisfaction of elderly people; Second, to find scientific evidence that contributes to the improvement of subjective life satisfaction of the elderly . Based on the results obtained in this paper, it is concluded that the elderly persons with economic assistance from children, residence system, availability of pension insurance, presence of medical insurance, presence of consultation, presence of daily care service by community, participation in community activities It has been found that the subjective lifestyle satisfaction of the subjects has a significant influence. Based on the results of these analyzes, policies such as spreading pension insurance, redistributing medical resources, setting up medical facilities in rural areas, and reducing medical costs can be useful for improving the subjective life satisfaction of elderly people. Also, when providing nursing care services to the elderly, it will be necessary to pay attention to not only physical nursing care services but also mental care services. Furthermore, by proactively developing community activities, we will enrich the culture and entertainment activities of the elderly, increase the pleasure of life, at the same time promote exchange among the elderly, improve the living satisfaction of the elderly It is considered to be effective.
